

Instructions: Mini Grow Pot - Cactus

STEP 1

Place the growing medium pellet in a bowl or cup. Add approximately 1 tablespoon lukewarm water. The pellet will expand as it absorbs the water and turn into growing medium. Fluff with fork, adding more water if necessary.

STEP 2

Add growing medium to the pot.

STEP 3

Sprinkle seeds over growing medium and lightly press seeds into the growing medium.

STEP 4

Cover pot with plastic wrap. Secure with rubber band if necessary.

Care:

WATERING

Keep moist, but do not overwater. Pull back plastic wrap spray mist with a spray bottle as necessary. Replace plastic wrap.

LIGHT

Place pot in a warm, sunny location. Avoid direct sunlight until after seedlings are well established (3-6 months after seedlings emerge). For best results, rotate the pot often so all sides receive equal sunlight.

GERMINATION

Germination may take 1 to 3 months. Remove plastic wrap to spray mist and keep growing medium moist as necessary. Replace plastic wrap after misting.

TRANSPLANTING

Once seedlings emerge, poke a few holes in the plastic wrap for air circulation. Remove plastic wrap once seedlings are about the size of a pencil eraser (3-6 months after seedlings emerge). Continue to mist growing medium allowing growing medium to dry out between mistings. Keep in mind that cactus plants grow very slowly.
